

Patient Tracking System

By: Andrew Patton

Date: 10/23/2025

Overview

This system is designed to be a web based application that assists clinicians in managing patient admissions, discharges and room assignments more efficiently

This eliminates the use of paper charting and even some systems that would be using another separate application that would be doing the same thing.

It provides real-time updates as the patient moves in the building, keeping consistency for all users

System Features

- Add, edit, discharge and delete patients from the system
- Search by name and MRN
- Real time updates
- User-friendly interface
- Comforting format, using a gray and green color scheme

Patient Tracker							
Patient updated							
Patients							+ New Patient
Search name / MRN / location			All Statuses		Filter		
MRN	Name	DOB	Status	Location	Updated	Actions	
444777888999	cctest, leo	2002-05-20	Discharged	SSU	2025-10-23 18:15	Edit	Discharge Delete
555444999	zzztest, Ashley	1993-04-29	Admitted	bone	2025-10-23 18:14	Edit	Discharge Delete
111222333444	test, alaina	2014-02-25	Admitted	PCCU	2025-10-23 18:14	Edit	Discharge Delete
022552255222	patton, andrew	2022-01-25	Registered	heart	2025-10-21 20:20	Edit	Discharge Delete

How it works

Hospital staff logs into the Web interface

Enter and edit the patient info

Data saves instantly

Updated table will show in the browser on the dashboard page

Nex Steps

- Definitely need to scale back the amount of depth i wanted to initially put into this application
 - I initially wanted this to be its own app that would near replace an existing EHR. Unfortunately my sights were aimed to high for that
- Next, I would like this application to generate reports such as admissions, discharges and all patients seen
- I would also like it to be a place for a patient to log into where they can see their own history in the application. So there would be two different logins. One for Clinicans/hospital staff and the other for patients
